Scrum Master Certification

✓ Scrum is an Agile process that allows users to focus on delivering the highest business value in the shortest time. Scrum allows practitioners to inspect actual working software and decide whether to release it or continue on another enhancement program.

✓ The Scrum Master leads the Scrum team and is liable for the success of a project, giving direction to the product owner and the team and ensuring that team members follow all agile practices.

✓ During this course, you will learn about the difference between scrum and agile and why scrum is popular. You will also learn about various essential topics such as agile methodologies, scrum team, sprint planning, personality styles, scrum techniques, DSDM methodology, and many more.

✓ At the end of this Scrum Master Certification, you will be able to use various scrum techniques effectively and efficiently. You will also be able to develop a team and perform various roles and responsibilities of scrum master.
